

Albanian Highway Concession

The major northeast–southwest motorway in Albania

“NATION ROAD”, ALBANIA

THE CHALLENGE

Albanian Highway Concession was undertaking road improvements within the “Nation Road”, which required video surveillance for the following purpose:

- Protecting property and other infrastructure
- Protecting the health and safety of employees, customers and members of the public
- The management and investigation of major incidents
- Realtime traffic monitoring
- Enforcing traffic rules and regulations
- Supporting the efficient management and operation of road networks

ENSURING PUBLIC SECURITY AND SAFETY

Albanian Highway Concession is responsible for the management, maintenance and upkeep of roads throughout the so called “Nation Road”. The highway is part of the national roads network and constitutes the largest road engineering project in Albania’s history. Linking Milot, approximately 60 km northeast of the Adriatic Port of Durres, with Morine at the Kosovo border, the route forms the central section of the wider Albania-Kosovo highway, connecting Durres with the Kosovo capital Prishtina.

Albanian Highway Concession elected CSP to conduct a complete audit of their CCTV System requirements to ensure that all of their expectations are fulfilled accordingly with European Standards.

CSP proudly offers a wide range of security, safety, communications and automation solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.

14 Outdoor Cameras

4 LPR and Speed Cameras

2 PTZ Outdoor Cameras

THE RESULTS

CCTV surveillance enables centralized traffic monitoring, especially at major road intersections. It supplies relevant information to help law enforcement agencies and emergency services deal with accidents. Road and highway crews can also be dispatched to remove hazards or repair malfunctioning equipment.

Unlike most CCTV and VMS platforms, Axis has no annual maintenance fees, so has no on-going overheads. Analytics can be added in future for further system intelligence; these include functionality like tailgating, vehicle counting, presence, enter/exit, appear/disappear, direction filter, speed filter, stationery, loitering, abandoned object and removed object. Further add-on modules include License Plate Recognition (LPR); Briefcam Synopsis; Facial Recognition; Edge Recording; and Edge Analytics. This means there are no limits to a system's upgrade flexibility.

The combination of Axis cameras; VMS and analytics software; and CSP's system expertise has provide Albanian Highway Concession with a robust and reliable Highway solution. This combination of products is now being rolled out across many other intersections through all "Nation Road".

"We consider CSP to be a very good technology partner. They're extremely knowledgeable about their products and the projects they're involved in. They always accommodate our requirements and when there are problems, they work to solve them with us".
